MARINE INTERCEPT PROGRAM

The Marine Intercept Program (MIP) is a voluntary program for Marines who are identified as having a suicide ideation (SI) or a suicide attempt (SA). Identification occurs via Operations Event (OPREP-3) Serious Incident Report (SIR) and/or a Personnel Casualty Report (PCR). MIP is a collaboration between a Marine, the Marine's Command, the installation Community Counseling Program (CCP), and HQMC.

MIP is an evidence-informed targeted intervention that provides care coordination, caring contacts, ongoing suicide risk assessment, increased coping skills through application of a safety plan, and communication with command. MIP is provided by the Community Counseling Program (CCP).

CCP MIP care managers contact the Marine at days 1, 3, 7, 14, 30, 60, and 90 after acceptance of MIP services. After each contact with the Marine, CCP MIP care managers update the unit Commanding Officer, Executive Officer, or Sergeant Major.

COMMAND

The command immediately contacts the installation CCP closest in proximity to where the SIR and/or PCR was submitted in response to an identified SI or SA.

Commands can provide support by:

Being the point of contact to assist coordinating the Marine's care and resources

Sharing contact information if the Marine is currently receiving inpatient care, and informing CCP immediately upon discharge—this is a time of increased risk

Supporting the Marine's engagement in services

Offering feedback and input regarding the Marine

Assisting with reintegration

Ensuring all units are familiar with MIP and the support it provides

MIP CARE MANAGER

Once a Marine is identified as having a SI or SA, the Community Counseling Program assigns a care manager to provide caring contacts.

The CCP MIP care managers will:

- Focus on highest risk time period
- Make contact with Marine at days 1, 3, 7, 14, 30, 60, and 90
- Maintain a collaborative approach with command leadership and healthcare providers
- Provide command status updates
- Use evidence-informed suicide risk assessment tools
- Create and update a safety plan, an evidence-informed tool
